Glossary

Arrears	Arrears are calculated in accordance with standard market practice in the UK. A mortgage is identified as being in arrears when, on any due date, the overdue amounts which were due on previous due dates equal, in the aggregate, one or more full monthly payments. In making an arrears determination, the servicer calculates as of the date of determination the difference between the sum of all monthly payments that were due and payable by a borrower on any due date up to that date of determination (less the aggregate amount of all authorised underpayments made by such borrower up to such date of determination) and the sum of all payments actually made by that borrower up to that date of determination. If the result arrived at by dividing that difference (if any) by the amount of the required monthly payment equals or exceeds 1 the account is deemed to be in arrears. Arrears classification is determined based on the number of equivalent full current monthly payments that have been missed. A borrower that has missed payments that in the aggregate equal or exceeding 2 monthly payments (but for which the aggregate of missed payments is less than 3 monthly payments) would be classified as being 2 to <3 months in arrears, and so on.
Arrears Capitalisation Policy	TSB will consider capitalising arrears where a customer has made at least 6 consecutive full repayments since the last missed payment and the customer has provided consent for the capitalisation.
Constant Default Rate (CDR)	The default rate in the month is calculated as follows: $1 - (1 - (\text{balance of loans repossessed in the month (excluding recoveries)} / \text{portfolio balance at the start of the month}))^{12}$ The annualised default rate since transaction close is calculated as the average of all of the monthly annualised CDRs since transaction close expressed as a percentage.
Constant Prepayment Rate (CPR)	Monthly CPR on that calculation date means the total unscheduled principal receipts received during the period of one month ending on that calculation date divided by the aggregate current balance of the loans comprised in the portfolio as at the immediately preceding calculation date. Unscheduled Principal Repayments comprise payments from TSB for the repurchase of loans from the portfolio, and capital repayments and redemptions other than those received at the expected term end date of the loan. These are annualised using the formula: $1 - ((1 - M)^{12})$ where M is the monthly CPR expressed as a percentage. Quarterly CPR - The average of the three most recent monthly annualised CPRs expressed as a percentage. CPR Since Transaction Close - The average of all of the monthly annualised CPRs since transaction close expressed as a percentage.
Current Balance	Means, in relation to any loan at any date, the aggregate balance of the loan at such date (but avoiding double counting) including: (a) the Initial Advance; (b) any increase in the principal amount of a loan due to any further advance; (c) capitalised expenses; (d) capitalised interest; and (e) all expenses charges, fees, premium or payment due and owing by the borrower which have not yet been capitalised (including accrued interest, arrears of interest, high loan-to-value fees, insurance premiums, booking fees and valuation fees), in each case, relating to such loan less all prepayments, repayments or payments of any of the foregoing made on or prior to such date, and, in relation to the portfolio, the aggregate of the Current Balances of each loan in the portfolio.
Excess Spread	Excess spread is the available revenue receipts after the payment of senior fees, interest on the notes, payments/receipts under the swaps and replenishment of the reserve fund.
FSCS	Financial Services Compensation Scheme. This is the UK's statutory compensation scheme for customers of authorised financial services firms.
FSCS Limit	The FSCS compensation limit is currently £75,000
Geographic Analysis	The geographic analysis is prepared based on the Economic Planning Regions
Indexed LTV	The aggregate Current Balance of all loans within a mortgage account divided by the indexed valuation of the property securing the loans in that mortgage account at the reporting date.
Indexed Valuation	Indexation is applied on a regional basis to property valuations on a quarterly basis in January, April, July and October of each year using the Halifax House Price Index.
LCR	Liquidity Coverage Ratio.
Loan Seasoning	The number of months since the date of origination of the mortgage loan.
Losses	All realised losses in respect of a Loan, including any loss arising as a result of an exercise of any set-off by the relevant Borrower. Duncan Funding is only entitled to recoveries which have not been cured by Excess Spread.
